

1. Title Page

- Project Title
- Student's Name
- Student ID
- Faculty
- Department
- Submission Date

2. Table of Contents (*Heading 1*)

- List all sections and subsections with page numbers. (*Generated automatically*).

3. Abstract (*Heading 1*)

- A brief summary of the project, including the problem you are addressing, objectives, methodology, and expected outcomes. (**Approx. 150-250 words**)

4. Introduction (*Heading 1*)

- **Background (*Heading 2*)**: Provide context for the project and why it is important. (**3-5 paragraphs**)
 - *Introduce the general area or domain relevant to the project (e.g., industry trends, societal needs, or academic importance).*
 - *Highlight any existing gaps, challenges, or opportunities that make the project necessary.*
 - *Use data, citations, or historical examples to support your points if applicable.*
- **Problem Statement (*Heading 2*)**: Clearly define the problem your project will address.
 - *Clear definition of the problem.*
 - *Contextualize the problem.*
 - *Explanation of the impact.*
 - *The root cause or underlying factors.*
- **Project Justification (*Heading 2*)**: Why is solving this problem important? What impact will the project have? (**3-5 paragraphs**)
 - ***Significance of the problem.***
 - *Restate why the problem needs immediate attention.*

- *Explain the risk of inaction.*
- ***Alignment with goals.***
 - *Show how the project aligns with stakeholders's expectations.*
- ***Tangible outcomes.***
 - *Specify the direct results the project will achieve.*
 - *Use quantifiable targets where possible.*
- ***Broader outcomes.***
 - *Discuss the indirect or long-term benefits of the project.*
- ***Evidence and Data.***
 - *Strengthen your justification with research, statistics, or real-world examples.*
- **Objectives (*Heading 2*):** List the main goals of the project (both general and specific).
- **Scope (*Heading 2*):** Define the boundaries of your project—what will and will not be included.

5. Literature Review (*Heading 1*)

- Review of existing works, technologies, or studies related to your project.
- Identify gaps in current knowledge or technology that your project aims to address.
 - ***Introduction.***
 - ***Review of the existing works.***
 - *Ppresent a synthesis of key studies, methodologies, or technologies directly related to your project.*
 - *Organise this section thematically, chronologically, or methodically..*
 - ***Identification of gaps.***
 - *Clearly articulate where the existing work falls short in addressing the problem your project targets.*
 - ***Summary.***

6. Proposed Solution (*Heading 1*)

- **Overview of the Solution (*Heading 2*):** Describe the solution you propose to implement.
 - *A brief description of your solution.*
 - *Core concept of methodology behind the solution.*

- *How the solution ties back to the problem you've identified.*
- **System Design (Heading 2)**: Present an initial high-level design, including system architecture, flowcharts, or UML diagrams.
 - *Include their explanations.*
- **Key Features (Heading 2)**: Highlight the main functionalities or features of your proposed solution.
 - *A bullet point list of key features with a brief description.*
 - *Features should align with the problem you're trying to address.*
 - *Include innovative and differentiating features (Optional).*

7. Methodology (Heading 1)

- **Development Approach (Heading 2)**: Explain the process or methodology you will follow (e.g., Agile, Waterfall, etc.).
 - *Specify the development methodology [Include a detailed description of the methodology].*
 - *Explain why this approach is suitable for the project.*
- **Tools and Technologies (Heading 2)**: List the programming languages, software tools, and frameworks you will use. *(You must be able to defend your choice).*
 - *Categorize them by their purpose.*
- **Data Collection (Heading 2)**: If applicable, explain how data will be collected and used in the project.
 - *Explain the types of data needed.*
 - *Describe the data collection methods.*
 - *Specify data sources.*
 - *If not applicable, explain why.*
- **Testing and Validation (Heading 2)**: Describe how you will test and validate the effectiveness of your solution. **(3-5 paragraphs)**
 - *Explain the testing strategy.*
 - *Describe how results will be validated against requirements or goals.*
 - *Outline tools and frameworks for testing.*

8. Work Plan and Timeline (*Heading 1*)

- **Tasks and Milestones (*Heading 2*):** Break down the project into tasks and milestones. (You will use WBS and SMART criteria).
- **Timeline (*Heading 2*):** Provide a Gantt chart showing when each task will be completed.
 - Provide a well designed and detailed Gantt chart.

9. Expected Outcomes (*Heading 1*)

- Describe what you expect the *final deliverables* to be, including any products, documentation, or performance improvements. (*A list of deliverables with a brief description of each.*)
- List any *potential limitations* of the solution. (*A list with brief description of each*)

10. Conclusion (*Heading 1*)

- Briefly summarize the importance of the project, your plan, and expected outcomes. (3-5 paragraphs).
 - *Importance of the project.*
 - *Summary of the plan.*
 - *Expected outcome.*

11. References (*Heading 1*)

- Include all the references and sources you consulted for the literature review and project development. (*Generated automatically - APA Style*).

12. Appendices (*Heading 1*)

- Data Collection Letter
- Case Study Organization Approval Letter
- Current System Analysis

Font: Times New Roman (*for the entire document, including the page numbers*)

Line spacing: 1.5

Formatting:

- **Heading 1:**
 - Bold
 - 16 points
 - Centered
 - All caps
- **Heading 2:**
 - Bold
 - 14 points
 - Centered
 - Title Case
- **Heading 3:**
 - Bold
 - 12 points
 - Left aligned
 - Title Case

TABLE OF CONTENTS and **ABSTRACT** are preliminary pages and as such, they must have different page numbers (i.e., Roman Numerals in contrast to Arabic Numerals).

[Current System Analysis - Next Page]

Cover Page

As demonstrated in the template provided. Please note that this is a separate document that is appended to the proposal.

PART I

AS IS PROCESS MODEL

Introduction

Paragraph 1 introduces the case study. Mainly, it's historical background.

Paragraphs 2: Provide an overview of all the business models in your case study and specify which one you will concentrate on. *Begin by outlining all the different business models that are present in the case study you are analyzing. This could include various approaches the company or organization takes to generate revenue, deliver products or services, or interact with its customers. Once you've covered all the relevant business models, identify the one that you will focus on in greater detail for the purpose of your analysis, explaining why this particular model is the most relevant or significant for your study.*

Paragraph 3: Discuss the problem with the business model that will be the focus of your research. (Examine the issues with the business model that you will focus on in your research.) *Take a deeper look into the challenges or flaws associated with the business model that you have chosen to concentrate on in your research. This involves identifying specific problems or shortcomings that may be affecting the model's effectiveness, profitability, or long-term sustainability. You should analyze factors such as market conditions, operational inefficiencies, customer feedback, or external influences that could be contributing to the issue. This analysis will form the foundation of your research and provide insights into potential solutions or improvements.*

Paragraph 4: Conclusion.

PART II

PROBLEM WITH THE CURRENT SYSTEM

Introduction

Framework: PIECES (Be sure to have a thorough understanding about this framework).

Guidelines:

Let's understand the characteristics of the content in this section.

- **Problem:** Begin by clearly defining the core problem with the current system. Make sure to avoid jumping ahead to potential solutions at this stage—focus solely on articulating the problem.
- **Current:** Use factual language to describe the existing situation without embellishment. Present the facts clearly and concisely. Avoid speculative language or assumptions—just focus on what is happening right now.
- **System:** Make sure the analysis is centered around the system itself. Focus on how the processes, structures, or technologies involved in the system contribute to the problem. Describe the system's functioning as a whole, considering the interconnectedness of its parts, and emphasize how it directly affects the issue at hand.
